→ BEFORE detection of aphids in the crop
-  Releases → **Every 2 weeks**
-  Crop area covered per tube → **200 m²**
-  Tubes must stay in the crop
→ **At least 4 weeks**
-  Protection of:
→ **Mixed vegetable crops**
(pepper, eggplant, cucumber, tomato...)

Dedicated solution for covered mixed vegetable crops

VerdaProtect is designed to protect covered vegetable crops (in tunnels, glasshouses) against aphids using parasitic wasps. The mix of different species of parasitoids used in a preventive way allows an immediate control of the aphids as soon as they appear in the crop. It is particularly adapted for mixed vegetable crops. Its ease of use is also particularly appreciated by IPM beginners.
